YATES COUNTY HEALTH PROFILE

Finger Lakes Health Systems Agency, 2017
The purpose of this report is to provide a summary of health data specific to **Yates County**. Where possible, benchmarks have been given to compare county rates to Upstate New York.

10% of households speak a language other than English. More than 120 of those households have Limited English Proficiency (LEP).

12.5% of the population is living with a disability.

3.9% of the labor force is unemployed.

77.0 years is the average life expectancy at birth.

About Yates County

More than 3,400 residents – 14.5 percent of Yates County’s population – live below the federal poverty level according to U.S. Census statistics. As the map illustrates, poverty is found in areas throughout the entire county. Research shows that lower socioeconomic status (SES) is linked to higher incidence of chronic disease, shorter life expectancy and lower rates of good social, emotional and physical health.\(^1\)

Education levels can also predict life expectancy. The Centers for Disease Control and Prevention reports that adults aged 25 without a high school diploma "can expect to die nine years sooner than college graduates."\(^2\) Approximately 51 percent of Yates County residents have at least some form of college experience, compared to 59 percent of New York state residents.

Health Behaviors

Behavioral and personal lifestyles are important determinants of health. Smoking, poor nutrition and other unhealthy behaviors are linked to adverse health outcomes.

Each of the indicators for behavioral lifestyles shown below for Yates County are lower than Upstate New York Rates. Notably, there is a lower rate of leisure time physical activity in Yates County (63.8 percent).

</tr>
</tbody>
</table>

Adult smoking rates are lower in Yates County (13.8 percent) compared to Upstate New York (17.3 percent). It is estimated that there are more than 2,600 adults who currently smoke in Yates County.
Health Behaviors

Inactive lifestyles and poor diets may lead to obesity, a risk factor for developing diabetes, hypertension and other chronic illnesses. Rates of adults with physician-diagnosed diabetes are higher in **Yates County** (13.2 percent) compared to Upstate New York (9.2 percent).

</tbody>
</table>

For individuals with hypertension, controlling high blood pressure with medication and lifestyle change is critical to avoiding complications such as heart attack, stroke and kidney failure. The individuals who are most at risk for these life threatening events are those who have extremely high blood pressure, known as stage 2 hypertension. As of June 2016, the region’s high blood pressure registry showed that more than 66 percent of **Yates County** adults with hypertension had their condition under control. For residents whose blood pressure was uncontrolled, 21 percent had stage 2 hypertension.
Social Determinants of Health

The physical environment plays an important role in residents’ ability to engage in physical activity and access nutritious food. In Yates County, residents are more likely to report their neighborhood is suitable for walking and physical activity (96.9 percent) compared to Upstate New York (92.3 percent). In addition, there is a significantly lower rate of Yates County residents experiencing food insecurity (14.1 percent) compared to Upstate New York (22.7 percent).

<table>

</tbody>
</table>

Approximately one in ten (9.2 percent) Yates County residents report experiencing 14 or more poor mental health days in the past month. This is compared to 11.5 percent of Upstate New York residents.

Sources: ExpBRFSS 2013-2014, United States Dept. of Agriculture Economic Research Service 2010
Life Expectancy

Although average life expectancy in Yates County is 77.0 years, how long residents live on average varies by almost 4 years depending on their ZIP code.

For example, ZIP code area 14837, Dundee, has an estimated life expectancy of only 75.9 years at birth. By contrast, the county’s highest estimated life expectancy, 79.6 years, is found in Rushville’s 14544 ZIP code area.

Research has shown that poverty is associated with shorter life expectancy. Residents with lower socioeconomic status are less likely to seek preventative care and to monitor/maintain good health behaviors for a variety of different reasons.

Source: NYSDOH Vital Statistics 2012-2014 3-year estimates, calculations performed by FLHSA. ZIP codes eligible for highest and lowest ranking were required to have ≥2,000 residents. Life expectancies for ZIP codes with populations of less than 2,000 residents are unreliable.
Disparity

A comparison of ZIP codes shows that rates for maternal and child health indicators are higher in the ZIP code 14837, Dundee, area. In addition, there is a significantly higher rate of premature death in the Dundee area compared to Rushville.

However, there are higher rates of Prevention Quality Indicators (PQIs)* in Rushville's 14544 ZIP code area.

<td>2.9% of births</td>
</tr>
</tbody>
</table>

*Prevention Quality Indicators (PQI) were developed by the Agency for Healthcare Research and Quality, are based on ICD-9 coding. PQIs classify conditions that are seen as potentially preventable/avoidable had sufficient care been given in the primary care setting prior to the presentation. This value is a composite of all of the PQIs.
Leading Causes of Death

Leading causes of death in **Yates County** are similar to those of Upstate New York. The graph below demonstrates the five leading causes of death. The larger the bubble, the larger the problem in the geographic area.

Many of the leading causes of death shown in the figure above can be attributed to chronic diseases such as hypertension and obesity. However, the data below tell a slightly different story for premature death before age 75. Unintentional injury and suicide rank among the top five causes of premature death in **Yates County**.

Sources: Vital Statistics 2014. Premature mortality graph are 2012-2014 averages with deaths before age 75. Rankings exclude perinatal deaths. **CLRD** = Chronic Lower Respiratory Disease. All rates are age/sex adjusted.
Population Health Measures

In 2013, FLHSA convened the Regional Commission on Community Health Improvement. Over 18 months, the Commission engaged leaders from across the region to study and develop ideas for improving the integration of care and addressing the complex medical, behavioral and social needs of vulnerable community residents.

The Commission adopted a set of communitywide measures to gauge the region’s collective progress toward improved community health. Below are the population health measures selected by the Commission specific to **Yates County**. The icons indicate whether the Finger Lakes region is getting better, has remained flat or is getting worse for each measure.

Data Sources

U.S. Census Bureau/American Community Survey: Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau’s Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties. Data are based on a sample and are subject to sampling variability. The value shown here is the 90 percent margin of error. Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

New York State Department of Labor: Civilian Unemployment includes those individuals who were not working but were able, available and actively looking for work during the week including the 12th of the
month. Individuals who were waiting to be recalled from a layoff, and individuals waiting to report to a new
job within 30 days were also considered to be unemployed. Unemployment Rate is the number of
unemployed as a percentage of the labor force.

**Expanded Behavioral Risk Factor Surveillance System/Sub-County Health Data Report:** Data was
collected for ExpBRFSS over the course of 12 monthly waves, starting April 15, 2013 and ending May 10,
2014. The goal of each wave was to obtain roughly 8.3 percent of the required completes in each county
for the landline survey and each region for the cell phone survey. Experienced interviewers conducted
telephone interviews using computer-assisted telephone interviewing (CATI) software.

**Finger Lakes Health Systems Agency (FLHSA) High Blood Pressure Registry:** The FLHSA
hypertension registry collects data from local medical practices on hypertensive patients. Data provided
are reflective of the patients involved in the registry. The Healthcare Effectiveness Data and Information
Set (HEDIS) is the tool used to measure hypertension control. Controlled hypertension are those who
have a reading in the past year <140/90; Stage 1 are those with a reading between 141/90—159/99;
Stage 2 are those with a reading >160/100. Those who have not had a reading in the past 12 months are
considered uncontrolled.

**United States Department of Agriculture Economic Research Service:** Low access to healthy food is
defined as being far from a supermarket, supercenter or large grocery store ("supermarket" for short).
Food desert status is defined as a low income census tract with a supermarket more than a half of a mile
away for urban tracts, and more than 10 miles away for rural tracts. Population size is according to the
2010 Census estimates. A census tract is considered to have low access if a significant number or share
of individuals in the tract is far from a supermarket. A significant number of the population includes at
least 500 people or 33 percent of the tract’s population.

**New York State Department of Health Vital Statistics:** The cause of death reported in this publication
is the underlying cause classified according to the tenth revision of the International Classification of
Diseases (ICD, 10th revision) adopted by New York state in 1999. Historically, several revisions of the
ICD have been used, therefore, it is necessary to employ a comparability ratio when comparing cause of
death statistics across revisions. Comparability ratios have been published by the National Center for
Health Statistics (NCHS).

**New York State Perinatal Data Profile:** Premature births are those which occurred prior to 37 weeks
gestation. Low birthweight babies are births weighing between 100-2499 grams. Late or no prenatal care
is defined as those who had prenatal care initiated during the third trimester of pregnancy or not at all.

**Statewide Planning and Research Cooperative System:** SPARCS is a comprehensive all payer data
reporting system established in 1979 as a result of cooperation between the healthcare industry and
government. The system was initially created to collect information on discharges from hospitals.
SPARCS currently collects patient level detail on patient characteristics, diagnoses and treatments,
services, and charges for each hospital inpatient stay and outpatient (ambulatory surgery, emergency
department and outpatient services) visit; and each ambulatory surgery and outpatient services visit to a
hospital extension clinic and diagnostic and treatment center licensed to provide ambulatory surgery
services. All calculations were performed by FLHSA and are age/sex adjusted rates.

**New York State Immunization Information System (NYSIIS):** NYSIIS is a statewide immunization
information system or registry which maintains immunization data of persons of all ages. The
recommended vaccinations by 36 months of age include the 4:3:1:3:1:4 immunization series: 4DTaP, 3 polio, 1 MMR, 3 hep B, 3 Hib, 1 varicella, and 4 PCV13.

**Student Weight Status Category Reporting System (SWSCR):** The SWSCR collects data on weight status category, including underweight, healthy weight, overweight or obese based on BMI-for-age percentile on children and adolescents attending public schools in New York State.

**NYS Department of Education:** Data are submitted to the New York State Department of Education (NYSED) by school districts, charter schools, Boards of Cooperative Education Services (BOCES), institutions of Higher Education and NYSED program offices.

**Centers for Medicare and Medicaid Skilled Nursing Facility Cost Reports:** Data are collected on nursing home days from 2013 residential health care facility cost reports. Population estimates are collected from the U.S. Census Bureau, June 2015.

About FLHSA

Founded in 1974, Finger Lakes Health Systems Agency is one of the nation’s oldest and most effective regional health planning organizations. Located in Rochester’s Neighborhood of the Arts, the agency serves the nine-county Finger Lakes region. We bring together health care providers, insurers, consumers and other partners to find common ground on our most pressing health challenges. Using the region’s most comprehensive health data, together we hammer out strategies for better care, smarter spending and healthier people. Learn more about our community tables, our data resources and our work improving population health at www.flhsa.org.
